

THE GREAT CONVERGENCE

Information technology and the New Globalization

A NEW BOOK BY RICHARD BALDWIN

PROFESSOR OF INTERNATIONAL ECONOMICS
THE GRADUATE INSTITUTE | GENEVA

Manufacturing & GDP shares shifted from G7 to a few developing countries

I6: China, Korea, India, Poland, Indonesia, Thailand

Globalisation's asymmetric impacts & “hyper-globalisation”

1. Disruptive in G7.
2. Cohesive in emerging markets.
3. Many developing nations de-industrialised “prematurely”.
4. Trade agreements changed; “Hyper-globalisation.”

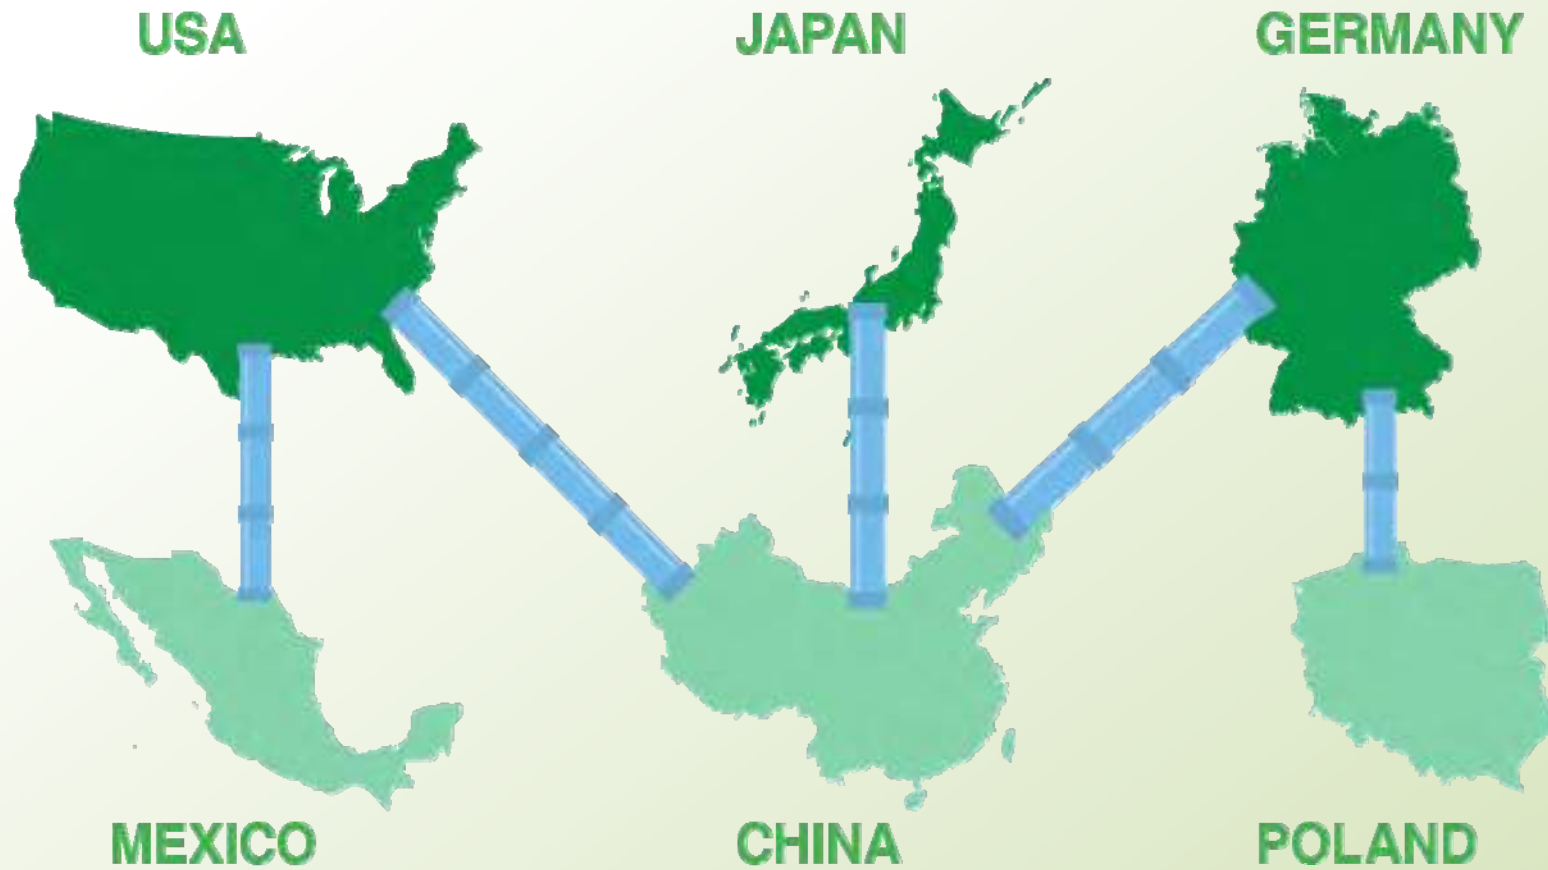

What if globalisation were about knowledge flows instead of trade flows?

Be extreme to be extremely clear

- Suppose everything is made from knowhow & labour.
- Suppose trade costs & barriers unchanged since 1990.
- Suppose in 1990 'pipelines' opened that allowed knowhow to flow across borders.

Assume this pipeline pattern

Pipeline opens; “Globalisation as knowledge arbitrage” begins

- Headquarter Economies (G7)

- High $\frac{\text{Knowhow}}{\text{Labour}}$ High Wages

- Factory Economies

- Low $\frac{\text{Knowhow}}{\text{Labour}}$ Low Wages

What would international impact be?

- Manufacturing shifts from G7 to Factory Economies; is disruptive.
- Factory-Economy growth takes off (Great Convergence); is cohesive.
- Factory Economies embrace policies that foster knowledge flows; HQ Economies embrace policies that protect them.
- Other poor nations hurt by new competitiveness of I6.

How do we put knowledge back in the box?

Broader perspective on globalisation: 3 costs that form 3 constraints on globalisation

Trade costs
(cost of moving goods)

Communication costs
(cost of moving ideas)

Face-to-face costs
(cost of moving people)

Steam Revolution & Pax Britannica lowered the cost of moving goods

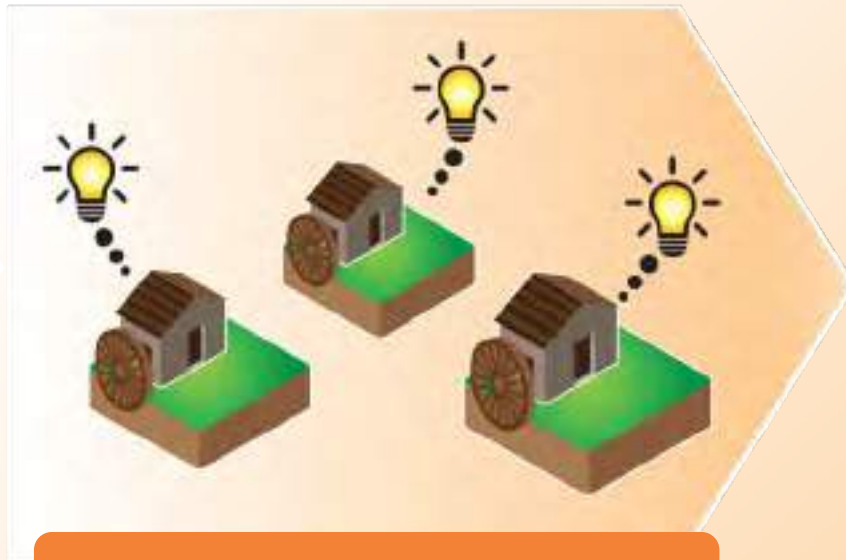

Low trade costs made high volume trade feasible; Comparative advantage made it profitable

As markets expanded globally, production clustered locally (to reduce communication costs, not trade costs)

Micro-clustering fostered innovation & ignited bonfire of innovation & modern growth

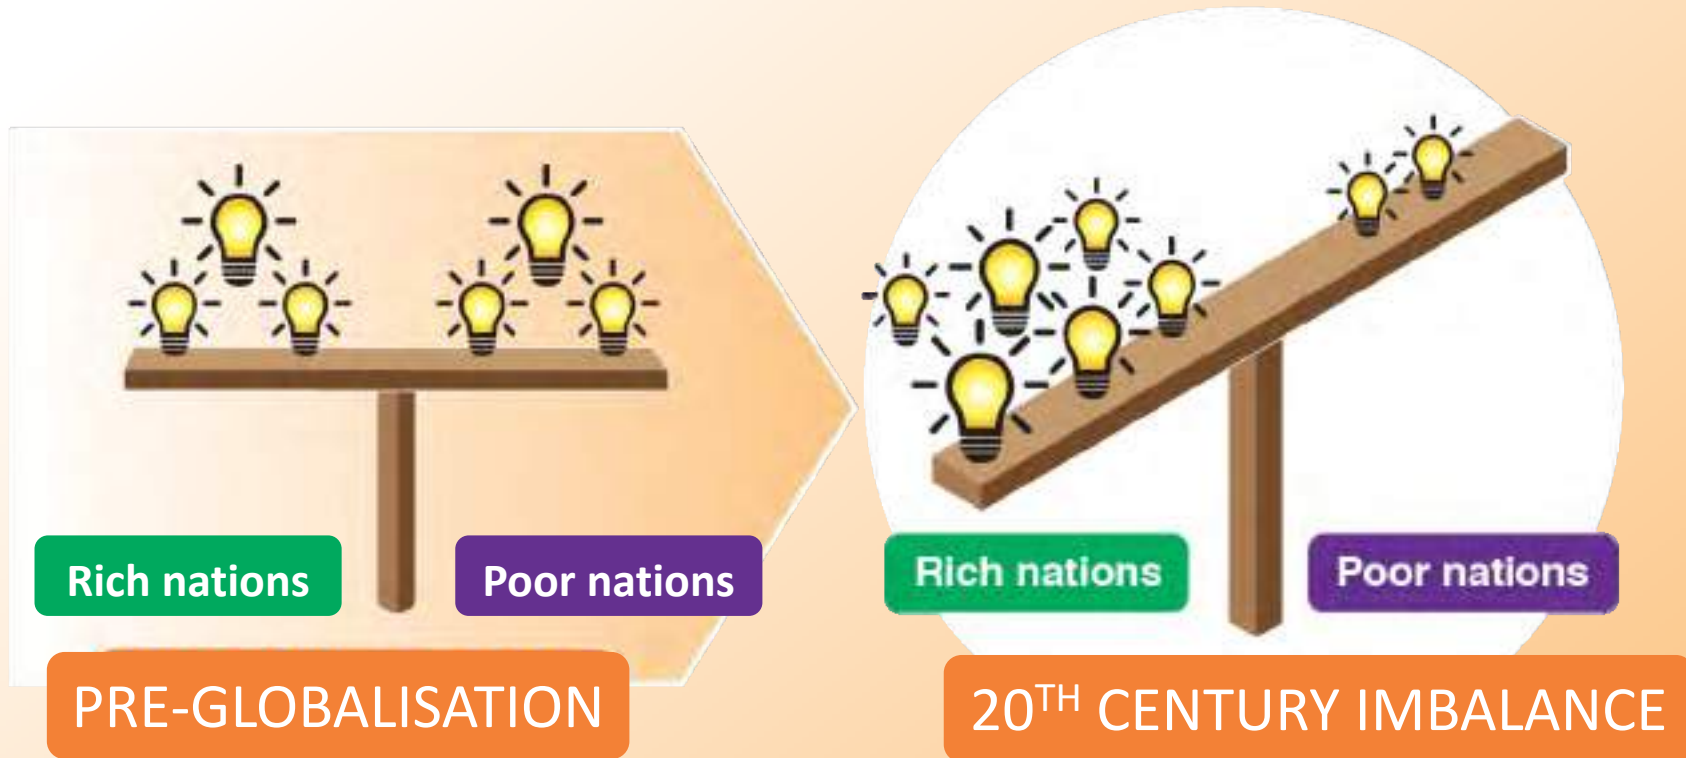

DISPERSED INNOVATION

CLUSTERED INNOVATION

High communication costs meant G7 innovations stayed in G7 nations; Knowhow imbalances appeared

OLD GLOBALISATION

Result: "The Great Divergence" (1820 to 1990)

Revolution in information & communications technology (ICT) lowered the cost of moving ideas

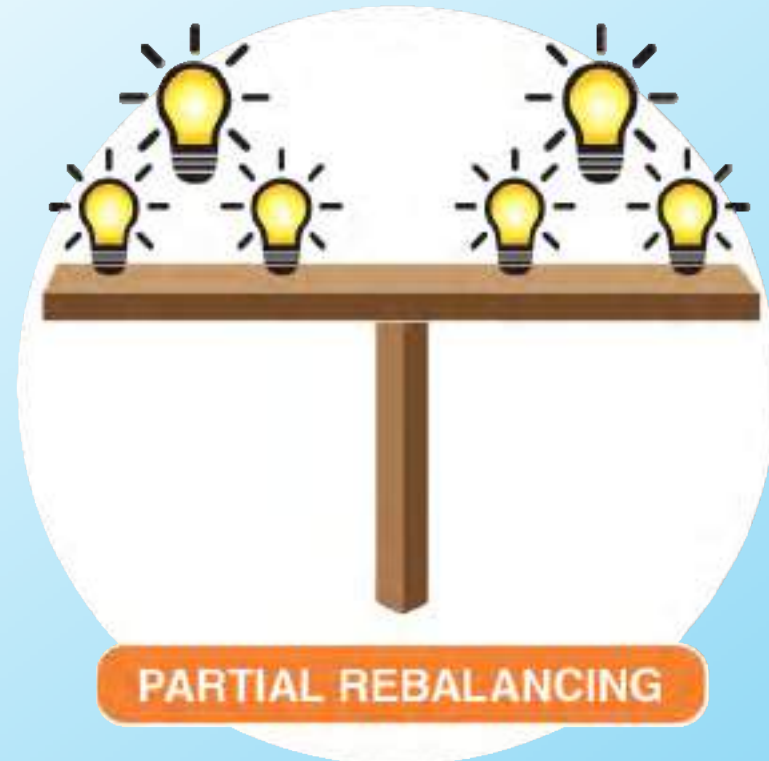

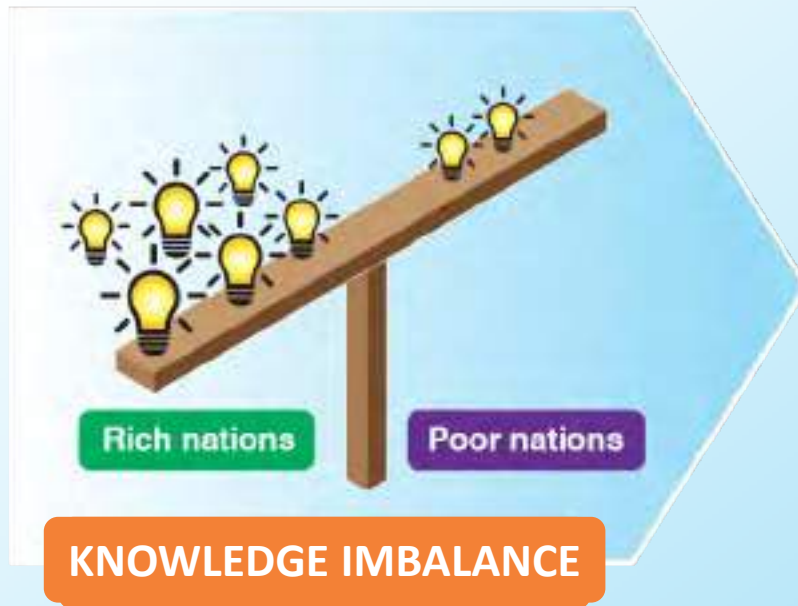

Lower communication costs made offshoring feasible; Vast wage differences made it profitable

To ensure offshored production meshed seamlessly, G7 firms offshored knowhow with the jobs

The new 'hi-tech-low-wage' mix shifted manufacturing & knowhow massively to a handful of developing nations

Future globalisation

We are going to need
a bigger boat

What happens when the Face-to-Face constraint is relaxed by technology?

Advanced technology for communications, not travel

CLOSE SUBSTITUTES TO “BEING THERE”

LOWER

LOWER

LOWER

Technology opens new kind of pipeline: Virtual migration

- Headquarter Economies (G7)
 - High $\frac{\text{Knowhow}}{\text{Labour}}$ **High wages**
 - Factory Economies
 - Low $\frac{\text{Knowhow}}{\text{Labour}}$ **Low wages**
- 

NEW, NEW GLOBALISATION?

Heart-warming story; Or massive disruption foretold?

- Technology allows “unbundling” of labour & labourers
- Telepresence & Tele-robotics.
- “virtual migration”.

Telepresence technology

NEW, NEW GLOBALISATION?

Brain jobs that telepresence could offshore?

Average monthly salaries in USD		
	US	Philippines
University Professor	6,100	400
School Teacher	4,100	300
Engineer	6,200	570

Robots vs telerobots

Robot & Artificial Intelligence (AI)

PEPPER

Telerobot & Remote Intelligence (RI)

DRONE

Telerobotics today

Doctors are controlling scalpel-wielding robots in real operations from afar, finds Rose Eveleth. Is this the future of surgery?

Jobs that telerobotics could offshore?

How not to address anti-globalisation

“Trump Tariff Act of 2017”: Would tariffs bring manufacturing jobs back to US?

RE-OFFSHORING?

20th century thinking meets a 21st century problem

#1) US tariffs won't stop knowledge offshoring but will raise cost of industrial inputs inside US

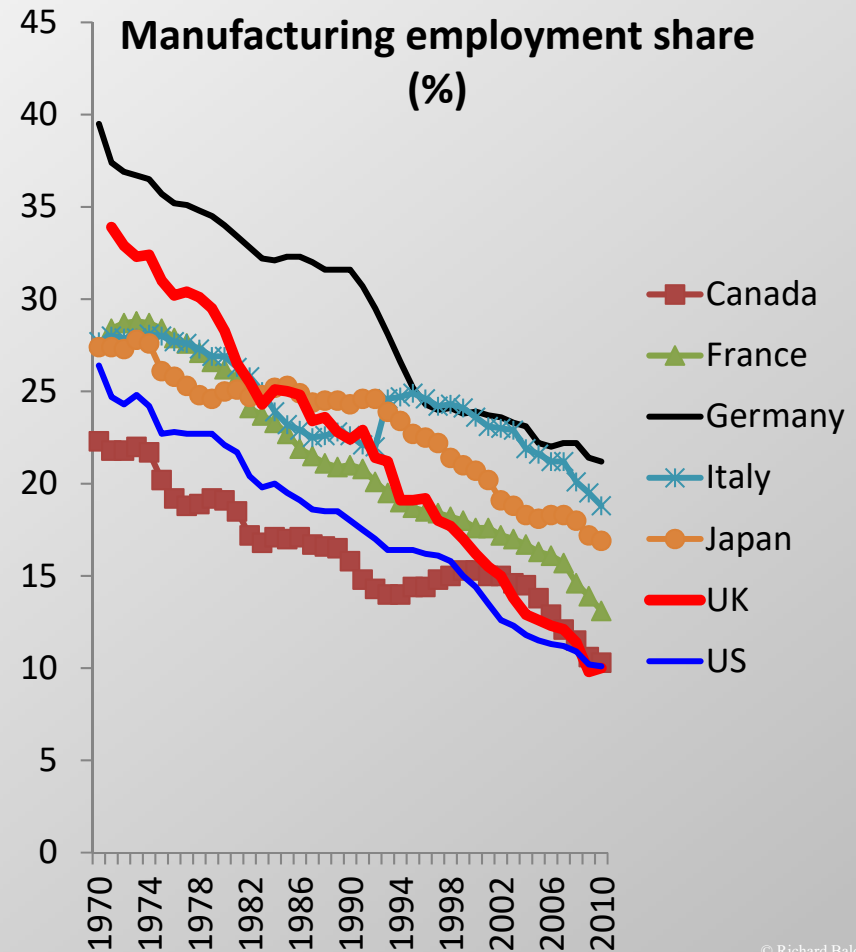

20th century thinking meets a 21st century problem

Protection makes US a high-cost “island” for imported industrial inputs

US tariffs encourage some reshoring of production for US market & more offshoring of production for non-US markets (foreign affiliate sales replace exports)

#2) Jobs come back? US workers are competing with China abroad & robots at home; it's not going well

Offshored jobs were low-skill & routine so reshoring production likely to make jobs for robots, not workers

What way forward?

Step 1: Accept 21st century realities

- New Globalisation isn't something foreigners doing to US.
- You can't vote against the New Globalisation by voting against the agreements that shape & control it
 - When water is flowing thru your hands, making a fist doesn't stop the flow.
- Old Globalisation tools harm competitiveness in New Globalisation world
 - All manufacturing nations must import to export.

Step 2: Rebuild the team & package it politically

- Rebuild the team:
 - Restore social cohesion with policies that protect individual workers, not individual jobs.
 - Retraining, education, mobility support, income support, maybe even active regional policy.
- Package it politically:
 - “Trade policy in the service of society;”
 - When proposing more open trade & international production share policies, also propose policies that help economically disenfranchised.

END - Thanks for listening

Table of Contents

Introduction	·	1
Part I: The Long History of Globalization in Short	·	17
1 Humanizing the Globe and the First Bundling	·	21
2 Steam and Globalization's First Unbundling	·	47
3 ICT and Globalization's Second Unbundling	·	79
Part II: Extending the Globalization Narrative	·	111
4 A Three-Cascading-Constraints View of Globalization	·	113
5 What's <u>Really New</u> ?	·	142
Part III: Understanding Globalization's Changes	·	177
6 Quintessential Globalization Economics	·	179
7 Accounting for Globalization's Changed Impact	·	207
Part IV: Why It Matters	·	221
8 Rethinking G7 Globalization Policies	·	225
9 Rethinking Development Policy	·	242
Part V: Looking Ahead	·	281
10 Future Globalization	·	283
